

## The Dulcimer Project Basic Package

This program is our *economy package* that requires some preparation and pre-assembly to be completed prior to bringing the workshop to the classroom. Comes with the Dulcimer Project Assembly Manual with fully illustrated instructions for building. With this package we suggest that you get at least one *Dulcimer Project instructional DVD* and the *Dulcimer Tuning and ToolsKit* to provide a step by step training process and all of the specialty tools required to make the project run smoothly.

### Classroom Dulcimer Kits

Each kit has a solid mahogany fretted fingerboard, and a 275 lb cardboard soundbox. A pick, a noter stick, and extra strings are included for each instrument. Sets of kits are packed with The Dulcimer Project Assembly Manual and all parts in separate bulk packages. The soundboxes need to be painted prior to assembly. All of the fretboards have the frets installed but require some sanding and finishing. The tuning machine holes are pre-drilled but the tuner screw holes need to be drilled prior to the workshop. These kits are intended for workshops where all the instruments will be built in one place, under the guidance of a leader or parent-teacher team.
